

MESTECH Research Project

Project Title:

Website Development and MESTECH Promotion

Project Researcher:

Ciara Byrne

Funding Body:

Beaufort Undergraduate Research Scholarship Programme 2013

Project Summary:

The main aim of this project is to increase the level of knowledge regarding the work MESTECH carries out and the fields of research they are involved in. The main task during the course of this project will be to update all areas of the MESTECH website so that it is current and relevant to the contemporary level of marine chemistry and technology that exists today. Undergoing web design training will be a paramount for this. Sending out regular tweets and updating various MESTECH members' personal profiles on academic databases with the most recent and up to date publications. This will allow other academics in the same field of work or even those with a keen interest in the area to see any developments that have advanced. This should lead to an enhanced profile for MESTECH throughout the academic vicinity.

Key Outputs:

- An enhanced profile for MESTECH throughout the DCU campus and throughout the fields of study relevant to its work
- Development of a website that has a greater source of knowledge throughout it with available information for interested parties

- A developed routine that can be maintained by future employees regarding the updating of news and information sent out by MESTECH
